

GRAINMAN EQUIPMENT No. 39 VOLUMETRIC ROTARY FEEDER

Equipment 39 shown without drive & guard

In almost every rice mill, after milling and polishing the rice, the mixture is graded and the separation of the head or whole grains from the different sized brokens takes place.

After this grading process, and in order to obtain a uniform product with a high commercial value, it is necessary to blend the different types of rice proportionally and adequately.

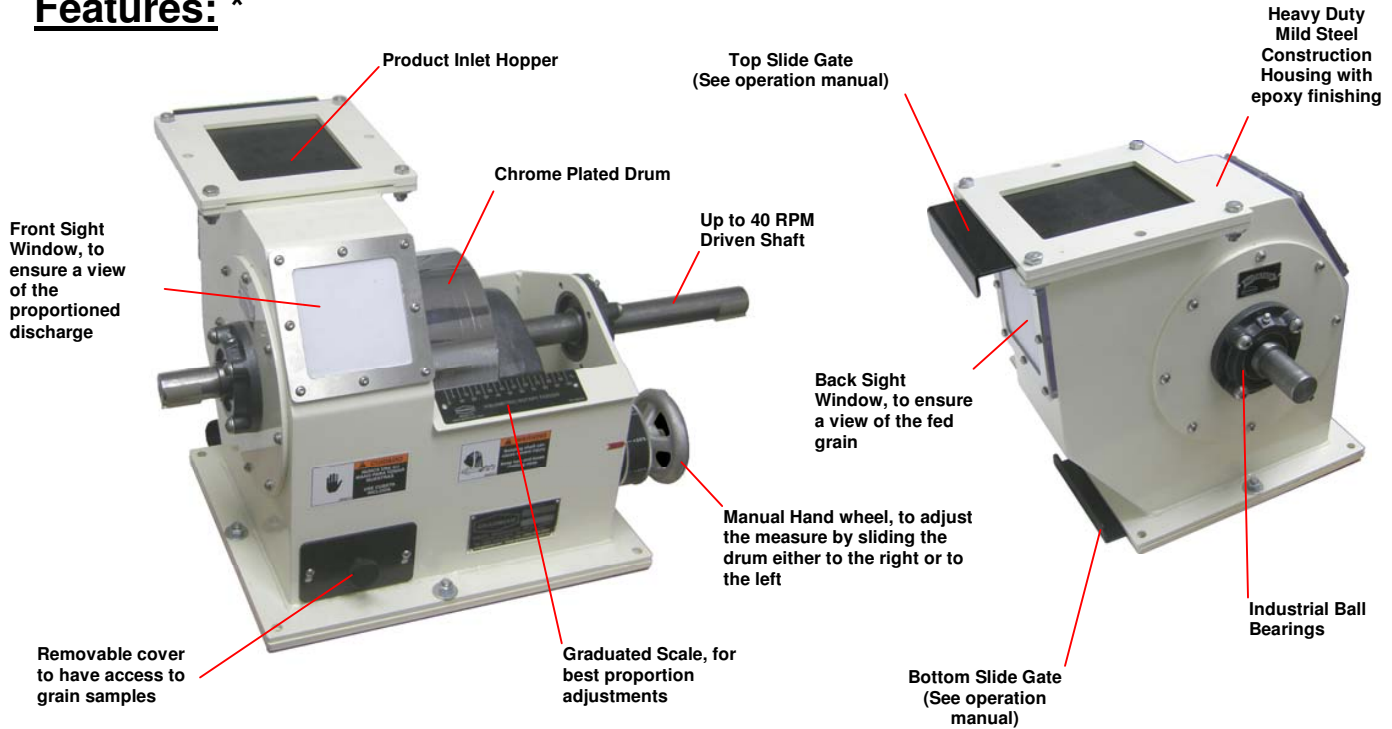

The Equipment No. 39 Volumetric Rotary Feeder is specially constructed to perform this process, handling the rice delicately at a high capacity and most dependable accuracy.

The Equipment No. 39 has a graduated scale, which enables the operator to set the proportion of each type of grain to be blended, without the use of complicated tables.

Because of the great and accurate capacity of the Equipment No. 39 Volumetric Rotary Feeder, only one system of 2 (or more) feeders would be sufficient in a rice mill for most blending requirements. It is always recommendable to provide adequate hoppers or bins above the feeders, to speed the process of blending thus saving time and manpower.

Features: *

"Pick Up Bucket" Assembly to obtain grain samples

Capacity MTH *		
20 R.P.M.	30 R.P.M.	40 R.P.M.
2.50	3.75	5.00

* Capacities are based on free flowing dry grain weighing 48 Pounds per Cu.Ft. being discharged under favorable conditions with a uniform and continuous in-feed. Capacity will vary with other materials.

Blender System with two Equipment No. 39 Rotary Feeders are shown for illustration purposes – Consult us for pricing and system options

Overall Dimensions			Shipping Information		
Deep	Width	Height	Net Weight	Gross Weight	Volume
			Lbs. (Kgs.)	Lbs. (Kgs.)	Cu.Ft. (M³)
16.75"	13.0"	15.5"	130 (58.96)	170 (77.11)	7.4 (0.21)

* Model 39 shown without drive & guard
